

How to Remove Java from MacOS

Requirements: You will need administrator permissions on your Mac.

1. Restart your Mac and log in.
2. Go to <https://www.java.com/en/download/uninstalltool.jsp> and click “I agree to the terms and want to continue”.
3. **JavaUninstallTool.dmg** will be downloaded to your default downloads location. Double click the dmg file to open it.
4. This will open the Java Uninstall Tool in a new window. Double click the icon for **JavaUninstallTool.app**.

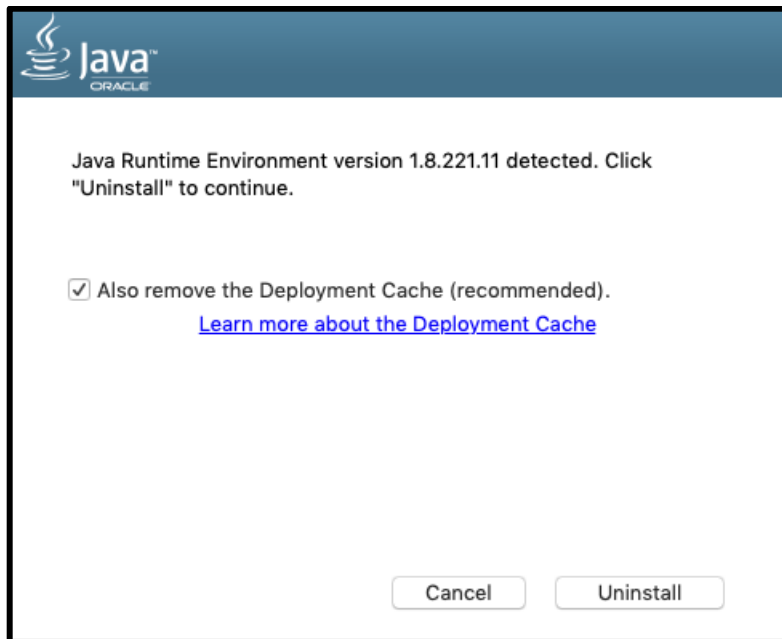

5. You may be presented with a prompt asking you to confirm you want to open the app. Click **Open** to continue.

6. Click **Agree** in the following window to uninstall Java Runtime Environment.

7. The tool will show you which versions of Java it detects. Leave the check box checked and click **Uninstall**.

8. If you are prompted to provide administrative permission, enter the password for your administrator account to continue.

9. Click **Finish** to complete the uninstall of Java on your Mac.
